

### **Applicability**

The Environmental Energy Adjustment (EEA) is applicable to all areas served by the District and to all kilowatt-hours (kWh) billed under all rate schedules. Each customer shall pay the applicable rate plus the EEA for each kWh delivered to the customer. The adjustment shall be the product of the total kWh for which the bill is rendered times the EEA amount per kWh.

### **Application of Charges**

The District shall calculate the EEA annually to recover costs relating to Green Energy and Greenhouse Gases Mandates. Green Energy costs are calculated based on the above markets cost differential between the District's eligible renewable power supply costs and applicable non-renewable power supply costs. Greenhouse Gases costs include, but are not limited to, the following: 1) projected expenditures related specifically to Greenhouse Gas emissions which include, but are not limited to, a) expenditures to purchase emission credits (net of emission credit sales), or b) taxes on emissions imposed by regulatory and/or governmental agencies; 2) Greenhouse Gases costs imposed by a) regulatory bodies, b) legislative mandates, or c) judicial settlements, orders, or decrees; and 3) other costs directly related to compliance with Greenhouse requirements that are components in the annual budget adopted by the District.

The EEA will be calculated to reconcile actual costs with budgeted costs. Any over or under collections will be factored into the subsequent calculation of the EEA.

### **Electric Service Rules**

Service under this Schedule is subject to the District's Electric Service Rules as they may be amended from time to time.
